**TIME DISSEMINATION SERVICES**

The following tables are based on information received at the BIPM between February and March 2026.

**AUTHORITIES RESPONSIBLE FOR TIME DISSEMINATION SERVICES**

AGGO
Argentinean-German Geodetic Observatory (AGGO)
Camino Gral. Belgrano km 40
1884 Berazategui, Provincia de Buenos Aires
Argentina

AOS
Astrogeodynamical Observatory
Borowiec near Poznan
Space Research Centre P.A.S.
PL 62-035 Kórnik - Poland

AUS
Electricity Section
National Measurement Institute
36 Bradfield Rd
Lindfield NSW 2070 - Australia

BelGIM
Belarussian State Institute of Metrology
National Standard for Time, Frequency and
Time-scale of the Republic of Belarus
Minsk, Minsk Region – 220053 Belarus

BEV
Bundesamt für Eich- und Vermessungswesen
Arltgasse 35
A-1160 Wien, Vienna – Austria

BIM
Bulgarian Institute of Metrology
General Directorate National Center of Metrology
52-B, Dr. G. M. Dimitrov Blvd.
1797 Sofia, Bulgaria

BoM
Ministry of economy - Bureau of metrology
Jane Sandanski 109a
1000 Skopje, Macedonia

BSJ
Bureau of Standards Jamaica (BSJ)
Time and Frequency Unit
6 Winchester Road
Kingston 10, Jamaica

CENAM
Centro Nacional de Metrología
Dirección de Tiempo y Frecuencia
km. 4.5 carretera a Los Cués
El Marqués, Querétaro 76246, México.

CENAMEP
Centro Nacional de Metrología de Panamá AIP
CENAMEP AIP
Ciudad del Saber
Edif. 206 Panama

DFM
Dansk Fundamental Metrologi, DFM A/S
Danish National Metrology Institute
Kogle Allé 5
DK-2970 Hørsholm
Denmark

**TIME DISSEMINATION SERVICES**

AGGO
Network Time Service:
AGGO operates a stratum-1 open access NTP server referenced to
UTC(AGGO).
Server Host Name: ntp.aggo-conicet.gob.ar

AOS
AOS Computer Time Service:
ntp.cbk.poznan.pl (150.254.190.51)

Synchronization: : Elproma TSG referenced to UTC(AOS)Service Area:
Poland/Europe
Access Policy: open access
Contact: Jerzy Nawrocki (nawrocki@cbk.poznan.pl)
Piotr Dunst (pdunst@cbk.poznan.pl)

AUS
Network Time Service
Computers connected to the Internet can be synchronized to UTC(AUS)
using the NTP protocol. The NTP servers are referenced to UTC(AUS) either
directly or via a GPS common view link.
Please see
http://www.measurement.gov.au/Services/Pages/TimeandFrequencyDisseminati
onService.aspx for information on access or contact time@measurement.gov.au

BelGIM
Internet Time Service:
BelGIM operates one time server Stratum 1 using the
"Network Time Protocol" (NTP). The server host name is:
http://www.belgim.by (Stratum 1)

BEV
Internet Time Service:
BEV operates three time servers using NTP and NTS (Network Time Security)
protocol.
The hostnames of the servers are:
bevtime1.metrologie.at
bevtime2.metrologie.at
time.metrologie.at
More information at https://www.bev.gv.at/en/Topics/Metrology-
Service/Metrological-Subject-Fields/Time-Services/Internet-Time-
Synchronization.html

Telephone Time Service:
BEV provides a time dissemination service via phone and modem to
synchronize clocks.
Uses the Time Distribution System from TUG. It has a baud rate of 1200 and
everyone can use it with no cost.
Access phone number is +43 1 21110 826381
The system will be updated periodically (DUT1, Leap Second…).

BIM
Internet Time Service "Six-pip time signals" are broadcast by Bulgarian National
Radio at 3 pm every day and controled by BIM.

BoM (1)
Internet Time Service
BoM operates two Stratum 1 NTP servers referenced to UTC(BoM).
BoM also operates one time server Stratum 2 using the "Network Time Protocol"
(NTP).
Server Host Name: time.bom.gov.mk

(1)     Information based on the Annual Report 2024, not confirmed by the Laboratory.

| | |
|---|---|
| BSJ | The BSJ operates a stratum 1 Network Time Protocol (NTP) server.<br>The server is available at IP address 66.249.155.4 |
| CENAM | CENAM operates a telephone voice system that provides the local time for time zones in Mexico.<br>Phone numbers and zones:<br><br>+52 (442) 211 0505 → Southeast Time (UTC–5)<br>+52 (442) 211 0506 → Central Time (UTC–6)<br>+52 (442) 211 0507 → Pacific Time (UTC–7)<br>+52 (442) 211 0508 → Northeast Time (UTC–8)<br>+52 (442) 211 0509 → UTC(CNM)<br><br>Telephone Code<br>CENAM provides a telephone code for setting time in computers. For more information about this service please contact tiempo@cenam.mx<br><br>Network Time Protocol (NTP)<br>Operates three stratum 1 time servers using NTP (located at CENAM).<br>Further information at https://www.cenam.mx/hora_oficial/sincronia.aspx<br><br>Web-based time-of-day clock which displays local time for all Mexican time zones. Referenced to CENAM Internet Time Service.<br>Available at http://www.cenam.mx/hora_oficial/ |
| CENAMEP | Network Time Server<br>A Stratum 1 time server is used to synchronize computer networks of the government institutions and companies in the private sector using the NTP protocol. To access the Network time service, send an email to servicios@cenamep.org.pa<br><br>Web Clock<br>A web clock is used to display the time of day in real time. To access the Web Clock, enter the link http://horaexacta.cenamep.org.pa/<br><br>Voice Time Server<br>An assembly of computers provides the local time. To access the service, call the telephone numbers (507) 5173201, (507) 5173202 and (507) 5173203 |
| DFM | DFM operates a network time service using the standard Network Time Protocol (NTP) and its authenticated version NTS available<br>from time.dfm.dk. The server is directly synchronized with UTC(DFM).<br>Further information at https://dfm.dk/ntp/<br>A web-based clock is available at https://dfm.dk/ur/<br>Access policy: free. |
| DMDM | Internet Time Service (ITS)<br>DMDM operates two Stratum 1 time servers using the "Network Time Protocol" (NTP), synchronized to UTC(DMDM).<br>Access policy: restricted.<br>DMDM also operates two Stratum 2 NTP servers:<br>vreme1.dmdm.rs or vreme1.dmdm.gov.rs<br>vreme2.dmdm.rs or vreme2.dmdm.gov.rs<br>Access policy: free.<br><br>Web-based time-of-day clock that displays local time for Serbia referenced to the DMDM ITS. Available at the web page:<br>https://www.dmdm.gov.rs/sr/ |

| | |
|---|---|
| EIM | No Internet Time Service offered<br>EIM operates a time server using the "Network Time Protocol" (NTP). |
| GUM | Telephone Time Service providing the European time code by telephone modem for setting time in computers. Includes provision for compensation of propagation time delay.<br>Access phone number :  +48 22 654 88 72 |

GUM:

Network Time Service

3 groups of NTP servers are available:

tempus1.gum.gov.pl

tempus2.gum.gov.pl

tempus3.gum.gov.pl

with an open access policy. It provides synchronization to UTC(PL).

Key for authenticated NTP service are shared via https://e-czas.gum.gov.pl

Contact: time@gum.gov.pl

Web Clock

A web clock is used to display the local time in Poland referred to the GUM NTP servers. Available at the web page: https://czas.gum.gov.pl and https://widget.e-czas.gum.gov.pl

PTP and WR services are provided to individual customers over dedicated fiber links.

HKO:

Internet Clock Services
HKO operates time-of-day clocks that display Hong Kong Standard Time (=UTC(HKO) + 8 h)
Available as web clock at https://www.hko.gov.hk/en/gts/time/clock_e.html

Speaking Clock Service
HKO operates an automatic "Dial-a-weather System" that provides a voice announcement of Hong Kong Standard Time.
Access phone number: +852 1878200
(when connected, press "3", "6", "1" in sequence)

Network Time Service
HKO operates network time service using Network Time Protocol (NTP).  Host names of the NTP servers: stdtime.gov.hk and stdtime.hko.gov.hk; time.hko.hk (for IPv6 users)
Further information at https://www.hko.gov.hk/en/nts/ntime.htm

ICE:

Network Time Server
Four Stratum 1 time servers are used to synchronize computer networks of the government institutions and companies in the private sector using the NTP protocol.
The servers are available at public IP addresses:
ntp.ice.go.cr
ntp1.ice.go.cr
To access the Network time service, send an email to ofallasc@ice.go.cr

Web Clock
A web clock is used to display the time of day in real time. To access the Web Clock, enter the link:
https://www.grupoice.com/wps/portal/ICE/telecomunicaciones/lametro

https://www.kolbi.cr/wps/portal/kolbi_dev/negocios/kolbi-empresas/solucionesadm/solucionesmetrologia

| | |
|---|---|
| IFZG | IFZG operate one Stratum 1 time server using the NTP protocol. This server is directly synchronized to UTC(IFZG). The server is available at public IP addresses: time.ifs.hr.  Web-based time-of-day clock is available at the web page: https://ifs.hr/ and https://ifs.hr/e/n/ |
| IGNA  (1) | Network Time Protocol<br>IGN operates an open access NTP server referenced to UTC(IGNA).<br>Server Host Name: ntp.ign.gob.ar (stratum 2, open access)<br>Setup instructions (spanish):<br>https://www.ign.gob.ar/NuestrasActividades/Geodesia/ServicioInternacionalHora/NTP<br><br>GPS common-view data<br>CGGTS and RINEX files for UTC(IGNA) are freely available through<br>https://www.ign.gob.ar/NuestrasActividades/Geodesia/ServicioInternacionalHora/TransferenciaDeTiempo |
| ILNAS | Network Time Service via NTP Protocol<br>Stratum-1 time server with monitoring (restricted access)<br>Host names:<br>ntp1.ilnas.blm.lu<br>ntp2.ilnas.blm.lu<br>ntp3.ilnas.blm.lu<br>Further information at:<br>https://portail-qualite.public.lu/fr/metrologie/etalonnages.html<br><br>PTP services are provided to individual customers over dedicated links. |
| IMBH | Network Time Service over Internet<br>IMBH operates several Stratum 1 time servers using the NTP protocol. These servers are directly synchronized to UTC(IMBH).<br>The servers are available at public IP addresses:<br>ntp1.imbih.gov.ba<br>ntp2.imbih.gov.ba<br><br>Common-view dataGPS and GLONASS common-view data using CGGTTS format referred to UTC(IMBH) are available at request.<br><br>Direct fiber-optical links using PTP/WR protocol.<br>Further information can be found at: http://met.gov.ba |
| INCP (1) | Network Time Server<br>A time server is used to synchronize computer networks of the government institutions and companies in the private sector using the NTP protocol. To access the Network time enter the link<br><br>https://www.gob.pe/8680-sincronizar-sistemas-de-computo-de-una-empresa-con-la-hora-oficial-del-peru<br><br>Web Clock<br>A web clock is used to display the time of day in real time.  To access the Web Clock, enter the link<br>https://www.inacal.gob.pe/inacal/proyectos/hora-nacional/HoraNacionalPeru. |

(1)     Information based on the Annual Report 2024, not confirmed by the Laboratory.

| INM | Network Time Service |
| --- | --- |
| | INM operates an open access time servers referenced to UTC(INM) using the "Network Time Protocol"; host names of the servers are: |
| | ntp1.inm.gov.co |
| | ntp2.inm.gov.co |
| | Further information on the web page: |
| | http://www.inm.gov.co/index.php/servicios-inm/hora-legal |
| | Web Clock Service |
| | A web clock is used to display the local time of day in real time. The web clock is available at: |
| | http://horalegal.inm.gov.co/ |

| INPL | Time dissemination service is performed in Israel by telecommunication companies, whose time and frequency standards are traceable to local UTC(INPL) time and are calibrated regularly once a year against the Israeli Time and Frequency National Standard kept by INPL. |
| --- | --- |

| INRIM | Internet Time Service |
| --- | --- |
| | INRIM operates two time servers using the "Network Time Protocol" (NTP); host names of the servers are ntp1.inrim.it and ntp2.inrim.it. More information on this service can be found on the web pages: https://www.inrim.it/en/research/scientific-sectors/time-and-frequency/ntp-network-time-protocol. |
| | Web-based time-of-day clock that displays UTC or local time for Italy (Central Europe Time), referenced to INRIM Internet Time Service. Provides a snapshot of time with any web browser. https://labtf.rime.inrim.it/webClock_utcit.html. |
| | Provision of UTC(IT) time signals for fiber-based distribution to linked users. |

| INTI | Network Time Service: |
| --- | --- |
| | INTI operates an open access NTP server referenced to UTC(INTI). |
| | Server Host Name: ntp.inti.gob.ar |

| JV | Network Time Protocol |
| --- | --- |
| | JV operates an open access stratum 1 server referenced to UTC(JV) |
| | ntp.justervesenet.no |
| | By special arrangement customers may get direct access to PPS and/or 10 MHz from UTC(JV) as a reference for customer's own timing devices hosted at JV. |
| | PTP White Rabbit services are currently running on an experimental basis over dedicated link(s). The link is operated using a the customer's own reference clock as input to a Grandmaster at customer premises and a White Rabbit switch at JV as a slave clock, which output is monitored against UTC(JV). |
| | JV also offers on commercial terms access to a real-time stream of GNSS observation data from a timing receiver referenced to UTC(JV). |

KRISS

Telephone Time Service
Provides digital time code to synchronize computer clocks to Korea
Standard Time (=UTC(KRIS) + 9 h) via modem.
Access phone number: + 82 42 868 5116

Network Time Service
KRISS operates time servers using the NTP
Stratum-1 time server connected to UTC(KRIS), not for service
Stratum-2 time server connected to Stratum-1 time server, not for service
Stratum-3 time servers (established in a cloud server): ntp.kriss.re.kr

KZ

Network Time Service
KZ (KazStandart) operates three Stratum 1 time servers using the "Network Time
Protocol" (NTP).

The hostnames of the servers are:
ntp1.ksm.kz  (Stratum 1)
ntp2.ksm.kz  (Stratum 1)
ntp3.ksm.kz  (Stratum 1)

LNE-OP

LNE-OP (formerly LNE-SYRTE) operates several time servers using the
"Network Time Protocol" (NTP) :
Stratum-1 time server: ntp-p1.obspm.fr (restricted access)
Stratum-2 time server: ntp.obspm.fr (free access)
Futher information at: http://syrte.obspm.fr/informatique/ntp_infos.php
A web application analyzing the desynchronisation of computers clock is
available at the following website: https://heurelegalefrancaise.fr/

LRTE

Internet Time Service
LRTE operates Stratum 1 and Stratum 2 time servers using the NTP protocol.
The servers are directly synchronized to UTC(LRTE).
The servers are available on free access at hostnames/ip :
lrtest1.ntp.ifsc.usp.br/ 143.107.229.211 -> stratum 1
lrtest2.ntp.ifsc.usp.br/ 143.107.229.210 -> stratum 2

Further information available at
https://www.ntppool.org/scores/143.107.229.211
https://www.ntppool.org/scores/143.107.229.210
https://thingspeak.com/channels/691405

LT

Network Time Service via NTP protocol
Host name: laikas2.pfi.lt
Directly referenced to UTC(LT)
System: ELPROMA NTS5000 LITE 2RD
Access policy: free

MASM  (1)

Computers connected to the Internet can be synchronized to UTC(MASM)
using the NTP protocol. Access is available for users free of charge
Address: ntp.mn  for the users within Mongolia
Host: master.ntp.mn
System: LANTIME  M1000
Access policy: free

(1)     Information based on the Annual Report 2024, not confirmed by the Laboratory.

METAS                    Internet Time Service
                         METAS operates three public stratum 1 NTP servers in open access policy,
                         namely:
                         ntp11.metas.ch
                         ntp12.metas.ch
                         ntp13.metas.ch
                         The alias ntp.metas.ch dynamically points to one of the above-mentioned servers.
                         More information available at http://www.metas.ch/metas/en/home/fabe/zeit-und-
                         frequenz/time-dissemination.html
                         PTP and White Rabbit services are provided to individual customers over
                         dedicated links.

MIKES  (1)               VTT MIKES provides an official stratum-1 level NTP service to paying
                         organizations and institutions. Stratum-2 level NTP service is freely available to
                         everyone. Both NTP services are provided over public internet.

                         PTP and PTP White Rabbit services are provided to individual customers over
                         dedicated links.

                         Further information can be found at http://www.mikes.fi/ntp-palvelu/

MSL                      Network Time Service
                         Computers connected to the Internet can be synchonized to UTC(MSL)
                         using the NTP protocol. Access is available for users within New
                         Zealand. Servers are available at pool.msltime.measurement.govt.nz and
                         msltime1.measurement.govt.nz

                         Speaking Clock
                         A speaking clock gives New Zealand time. Because it is a pay service,
                         access is restricted to callers within New Zealand.
                         Further information about these services can be found at
                         http://measurement.govt.nz/about-us/official-new-zealand-time

NAO (1)                  Network Time Service
                         Three stratum 2 NTP servers are available. The NTP servers
                         internally refer stratum 1 NTP server that is linked to UTC(NAO).
                         One of the three stratum 2 NTP servers are selected automatically
                         by a round-robin DNS server to reply for an NTP access.
                         The server host name is s2csntp.miz.nao.ac.jp.

NICT                     Optical IP Telephone Time Service (OTTS)
                         NICT provides digital time code accessible by computer using Network Time
                         Protocol, on Specific Optical IP Telephone lines and available only to agreement
                         users.

                         Network Time Service (NTS)
                         NICT operates three Stratum 1 NTP time servers linked to UTC(NICT) through a
                         leased line.

                         Internet Time Service (ITS)
                         NICT operates five Stratum 1 NTP time servers linked to UTC(NICT) through the
                         Internet, where servers are located in the headquarters and Kobe branch.
                         Host name of the servers: ntp.nict.jp (Round robin).

(1)     Information based on the Annual Report 2024, not confirmed by the Laboratory.

| | |
|---|---|
| NIM | Network Time Service |
| | Provides digital time code across the Internet using NTP server via free IP access: |
| | ntp1.nim.ac.cn |
| | ntp2.nim.ac.cn |
| | |
| | BDS/GPS common view data |
| | NIM provides the BDS/GPS common view data based on UTC(NIM) to the time service in China. |
| | |
| NIMB (1) | 1 NTP server is available: |
| | Address: ntp.inm.ro (STRATUM 1) with an open access policy |
| | Server is referenced to UTC(NIMB). |
| | |
| NIMT | Internet Time Services |
| | NIMT operates 5 NTP servers with around 30 back up services at: |
| | time1.nimt.or.th |
| | time2.nimt.or.th |
| | time3.nimt.or.th |
| | time4.nimt.or.th |
| | time5.nimt.or.th |
| | The NTP servers are referenced to UTC(NIMT). |
| | |
| NIST | Automated Computer Time Service (ACTS) |
| | Provides digital time code by telephone modem for setting time in computers. |
| | Free software and source code available for download from NIST. |
| | Includes provision for calibration of telephone time delay. |
| | Access phone numbers : +1 303 494 4774 and |
| | +1 808 335 4721 (2 phone lines). |
| | Further information at |
| | https://www.nist.gov/pml/time-and-frequency-division/services/automated-computer-time-service-acts |
| | |
| | Web-based time-of-day clock: https://time.gov |
| | |
| | Internet Time Service (ITS) |
| | Provides digital time code across the Internet using three different protocols: Network Time Protocol (NTP), Daytime Protocol, and Time Protocol. (Time Protocol is not supported by all servers) |
| | |
| | Geographically distributed set of multiple time servers at multiple locations within the United States of America. For most current listing of time servers and locations, see: http://tf.nist.gov/tf-cgi/servers.cgi |
| | Free software and source code available for download from NIST. Further information at |
| | https://www.nist.gov/pml/time-and-frequency-division/services/internet-time-service-its |
| | |
| | Telephone voice announcement: Audio portions of radio broadcasts from time and frequency stations WWV and WWVH can be heard by telephone: +1 303 499 7111 for WWV and +1 808 335 4363 for WWVH. For more information see: https://www.nist.gov/pml/time-and-frequency-division/radio-stations/wwv/telephone-time-day-service |
| | |
| | Time Measurement and Analysis Service (TMAS) and NIST Disciplined Clock (NISTDC) |

(1)     Information based on the Annual Report 2024, not confirmed by the Laboratory.

Subscription-based calibration services that utilize GPS common-view measurements and can either measure a clock with respect to UTC(NIST), or discipline an atomic clock to agree with UTC(NIST) with an uncertainty of ~10 ns ($k$ = 2). The NISTDC can be either a rubidium clock supplied by NIST or a cesium clock supplied by the customer. For more information see:

https://www.nist.gov/programs-projects/time-measurement-and-analysis-service-tmas

Time over Fiber is a subscription-based remote calibration service, where by special arrangement commercial fiber-optic telecommunication service (of various formats) is directly attached to customer end-point hardware hosted at either the NIST Boulder or Gaithersburg campuses. Hardware is provided with UTC(NIST) timing signals: e.g., pulse-per-second, radio-frequency reference, digital time-of-day. End-to-end calibration of each link, for example by GNSS common-view, is offered but not necessarily accepted by customers. Alternate modes of this service allow for connection to roof-mounted antenna systems for signal observation aligned with UTC(NIST) time signals. More information: https://www.nist.gov/pml/time-and-frequency-division/time-services/time-over-fiber.

Time over Satellite is a subscription-based remote calibration service using the two-way satellite time/frequency transfer technique. Currently, the service is only available from the NIST Boulder campus, and is subject to the availability of geostationary transponder service and NIST earth stations. More information: https://www.nist.gov/pml/time-and-frequency-division/time-distribution/two-way-satellite-time-and-frequency-transfer

NMIJ        GPS common-view data
GPS common-view data using CGGTTS format referred to UTC(NMIJ) are available through the NMIJ's web site for the remote frequency calibration service.

NMISA      Network Time Service
One open access NTP server is available at address time.nmisa.org.
More information is available at http://time.nmisa.org/

NMLS       Web-based time-of-day clock
A web clock is used to display the local time for Malaysia. The service is available at http://mst.sirim.my.

Network Time Service
The NTP time information is referenced to UTC(NMLS) and is currently generated by Stratum-1 NTP servers, made available to the public freely. The NTP server host names are ntp1.sirim.my and ntp2.sirim.my.

NPL        Internet Time Service

Five servers referenced to UTC(NPL) provide Network Time Protocol (NTP) time code across the internet.

More information is available from the NPL website https://www.npl.co.uk/products-services/time-frequency/network-time-protocol

The stratum-1 server host names are:
ntp1.npl.co.uk
ntp2.npl.co.uk
ntp3.npl.co.uk

**NPL**Time®

Commercial fibre-based time signal traceable to UTC(NPL).

For more information see https://www.npl.co.uk/products-services/time-frequency/npltime

| | |
|---|---|
| NPLI | **Web clock**<br>Web-based time-of-day clock that displays Indian Standard Time (IST) and UTC(NPLI). It also displays local time in user's time zone, time-of-day of the user's device clock and its difference. Available at the web page: http://www.nplindia.in/clockcode/html/index.php<br><br>**Internet Time Service**<br>Multiple Stratum 1 NTP servers referenced to UTC(NPLI) provide time service. The server host names are:<br>time.nplindia.org (Round Robbin)<br>time.nplindia.in (Round Robbin) |
| NRC | **Telephone Code**<br>Provides digital time code by telephone modem for setting time in computers.<br>Access phone number: +1 613 745 3900.<br>https://nrc.canada.ca/en/certifications-evaluations-standards/canadas-official-time/computer-time-date<br><br>**Talking Clock Service**<br>Voice announcements of Eastern Time are at ten-second intervals followed by a tone to indicate the exact time.<br>The service is available to the public in English at +1 613 745 1576 and in French at +1 613 745 9426.<br>https://nrc.canada.ca/en/certifications-evaluations-standards/canadas-official-time/telephone-talking-clock<br><br>**Web Clock Service**<br>The Web Clock shows dynamic clocks in each Canadian Time zone, for both Standard time and daylight saving time.<br>https://nrc.canada.ca/en/web-clock/<br><br>**Short Wave Radio**<br>CHU radio station broadcasts the time of day with voice announcements in English and French and time code at three different frequencies: 3.330 MHz, 7.850 MHz and 14.670 MHz.<br>https://nrc.canada.ca/en/certifications-evaluations-standards/canadas-official-time/nrc-shortwave-station-broadcasts-chu<br><br>**Network Time Protocol**<br>Operates multiple time servers using the " Network Time Protocol " at different locations and on two networks. Time synchronization is provided by a connection with the NRC stratum-1 servers. Monthly reports on the server's performance are provided to the client.<br>https://nrc.canada.ca/en/certifications-evaluations-standards/instrument-calibration-services/frequency-time-calibration-services.<br><br>**NRC TimeLinkTM – Remote Clock Service**<br>Subscription based GPS common-view service that provides a physical clock at the client's location which provides a time-of-day signal and a 1 pulse per second (1PPS) signal traceable to UTC(NRC) with uncertainty better than 1 us.<br>https://nrc.canada.ca/en/certifications-evaluations-standards/instrument-calibration-services/frequency-time-calibration-services.<br><br>Frequency and Time group official website:<br>https://nrc.canada.ca/en/certifications-evaluations-standards/canadas-official-time<br>Contact: MSS-SMETime@nrc-cnrc.gc.ca |

| NSC IM | Network Time Service. |
|---|---|
| | National Science Center Institute of Metrology (Kharkiv, Ukraine) operates time server Stratum 1 using the "Network Time Protocol" (NTP). |
| | Stratum-1 time server using the "Network Time Protocol" (NTP). |
| | Free access. |
| | ip 81.17.128.133 |
| | ip 31.202.14.125 |
| | ip 31.202.14.124 |
| | |
| | PTP services are provided to individual customers over dedicated links. |
| | |
| | The server host name is: http://www.metrology.kharkov.ua/ |
| | |
| NTSC | Network Time Service (NTS) |
| | NTSC operates a time server directly referenced to UTC(NTSC). Software for the synchronization of computer clocks is available on the NTSC Time and Frequency web page: http://www.ntsc.ac.cn/ |
| | Access Policy: free |
| | Contact: Shaowu DONG (sdong@ntsc.ac.cn). |
| | |
| ONBA (1) | Speaking clock access phone number 113 (only accessible in Argentina). |
| | Hourly and half hourly radio-broadcast time signal. |
| | Internet time service at web site http://www.hidro.gov.ar/observatorio/lahora.asp |
| | |
| ONRJ (1) | Telephone Voice Announcer (55) 21 35049265. |
| | Telephone Code (55) 21 25800677 provides digital time code at 300 bauds, 8 bits, no parity, 1 stop bit (Leitch CSD5300) |
| | |
| | Internet Time Service at the address : 200.20.186.75 and 200.20.186.94 |
| | SNTP at port 123 |
| | Time/UDP at port 37 |
| | Time/TCP at port 37 |
| | Daytime/TCP at port 13 |
| | |
| | WEB-based Time Services: |
| | 1) A real-time clock aligned to UTC(ONRJ) and corrected for internet transmission delay. |
| | Further information at: http://200.20.186.71/asp/relogio/horainicial.asp |
| | 2) Voice Announcer, in Portuguese, each ten seconds, after download of the Web page at: http://200.20.186.71. |
| | |
| | Broadcast Brazilian legal time (UTC – 3 hours) announced by a voice starting with "Observatório Nacional" followed by the current time (hh:mm:ss) each ten seconds with a beep for each second with a 1KHz modulation during 5ms and a long beep with 1KHz modulation during 200ms at the 58 , 59 and 00 seconds. The signal is transmitted every day of the year by the radio station PPE, whose signal is at 10 MHz with kind of modulation A3H and HF transmission power of 1 kW. |
| | |
| ORB | ORB operates several Stratum 1 and 2 time servers using the Network Time Protocol (NTP): |
| | Host name: ntp-public-1.oma.be and ntp-public-2.oma.be |
| | Access policy: free |
| | Access to Stratum 1 server possible: free after validation |
| | Synchronization to UTC(ORB) |
| | Contact: ntp-as@oma.be or time_lab@oma.be |
| | For further information, visit https://betime.be |
| | Web Clock Service |
| | The Web Clock displays UTC(ORB), one of the basis for the Belgian legal time |
| | URL: https://betime.be |
| | PTP and White Rabbit services, as well as a stable optical carrier (OC) are provided to individual customers over dedicated links |

(1)    Information based on the Annual Report 2024, not confirmed by the Laboratory.

| PTB | Contact : time@ptb.de<br>Information on the web pages<br>https://www.ptb.de/time |
|---|---|

Telephone Time Service
The coded time information is referenced to UTC(PTB) and generated by a TUG type time code generator using an ASCII-character code.
The time protocols are sent in a common format, the "European Telephone Time Code". Access phone number: +49 531 51 20 38.

Internet time service
PTB operates four time servers using the "Network Time Protocol" (NTP), see https://www.ptb.de/cms/en/ptb/fachabteilungen/abtq/gruppe-q4/ref-q42/time-synchronization-of-computers-using-the-network-time-protocol-ntp.html for details and explanations.

The hostnames of the servers are
ptbtime1.ptb.de
ptbtime2.ptb.de
ptbtime3.ptb.de
ptbtime4.ptb.de

Since 2020, PTB has enhanced these time servers with Network Time Security (NTS). NTS is a security protocol specified in RFC 8915 that provides a scalable approach for protecting NTP packets. PTB's time servers offer NTS-secured NTP services to NTS capable customers who request them.
Currently, PTB is abolishing its fee-based authenticated NTP service (available under ntpsmgw1.ptb.de and ntpsmgw2.ptb.de) that relies on NTP's pre-shared key approach specified in RFC 5905. New keys for the services are not available for purchase anymore as of January 2025, and the last keys still in use will become invalid after December of 2025. As NTS replaces the old pre-shared key approach with automatic key distribution and stronger cryptography, the discontinued fee-based connections are being migrated to the free NTS-secured time service.

PTB has also created a service for the dissemination of legal time via the WWW. The PTB clock is completely programmed in pure Hypertext Markup Language (HTML). Time requests to the PTB server are made via WebSocket (WS), a supplement to the established Hypertext Transfer Protocol (HTTP) specified by the IETF.
URL: https://uhr.ptb.de

| RISE | The coded time information is referenced to UTC(SP) and generated by several NTP servers using the Network Time Protocol (NTP) for both IPv4 and IPv6. Servers with nts in hostname also supports Network Time Security (NTS) in addition to NTP.<br>Access host names: nts1.ri.se, nts2.ri.se, ntp1.sp.se, ntp2.sp.se, ntp3.sp.se, ntp4.sp.se |
|---|---|

Speaking Clock
The time announcement is referenced to UTC(SP) and disseminated from a computer-based system operated and maintained at RISE in Borås.
Access phone number :  90510 (only accessible in Sweden).
Access phone number : +4633 90510 (from outside Sweden).

More information about these services are found on the web sites
www.ri.se,
