

## 5. Basic Monitoring

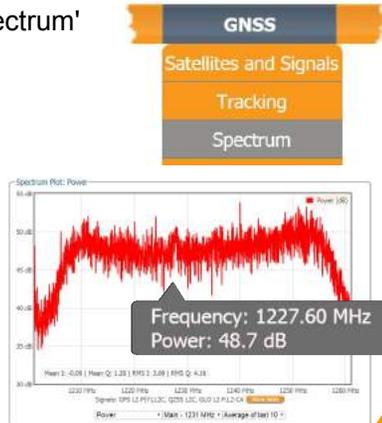

### Is the PolaRx5TR tracking satellites?

- Select the 'GNSS' tab then 'Satellites and Signals'
- In open sky, the PolaRx5TR should track between 15 and 25 GPS and Glonass satellites.
- The Carrier-to-Noise plot for GPS should show about 3 satellites with an L1CA above 50 dB-Hz

### Is there any interference?

- Select the 'GNSS' tab then 'Spectrum'
- Click 'Show table' on the Spectrum plot then select GPS L2-P(Y). This frequency band can be vulnerable to interference.
- The small GPS L2 signal at 1227.6 MHz should be visible. Other spikes or anomalous activity in the spectrum may indicate interference.

### For more information:

The memory stick delivered with the PolaRx5TR contains the following documents:

- PolaRx5TR User Manual
- PolaRx5TR Firmware Manual
- SBF Reference Guide

## PolaRx5TR

Quick Start Guide

### To set up the PolaRx5TR you will need:

Power adapter

Antenna

Antenna cable

WiFi capable device

or

USB cable

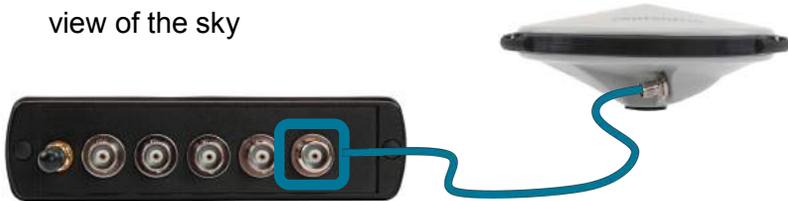

## 1. Powering up

- Connect the power adapter to the '**PWR**' socket on the PolaRx5TR front panel
- Plug the power adapter into the mains
- The PolaRx5TR will start up automatically

## 2. Connecting an antenna

- Connect one end of the antenna cable to the antenna and the other end to the rear-panel '**Main**' socket on the PolaRx5TR
- Make sure the antenna has a clear view of the sky

## 3. Turning on the WiFi

- Press firmly on the front-panel WiFi button to turn on the WiFi modem 

## 4a. Connecting to the PolaRx5TR over WiFi

- Find the PolaRx5TR WiFi signal on your device and click: **Connect**

- When connected, open a web browser using the IP address: **192.168.20.1**

or

## 4b. Connecting to the PolaRx5TR over USB

- Connect the USB cable between the PolaRx5TR and your PC
- Wait for the drivers to fully install

- When the drivers have installed, open a web browser with the IP address:

**192.168.3.1**
