

Calibrations between DMDM and OP

d are differential time corrections to be added to $[UTC(DMDM) - UTC(OP)]$,
and $u(d)$ are estimated uncertainties for the periods of comparisons.

Date	d/ns	$u(d)/ns$	Reference	Note
December 2006	-8.0	3.0	BIPM Report-2010/02	(1)

The uncertainties given in this table are conservative. They are mainly driven by the uncertainty due to the 'round-trip' reproducibility at the OP.

Notes

- (1) TTS-2 receiver (s/n: 043) at ZMDM
- (*) DMDM: formerly ZMDM.
