

Calibrations between DTAG (*) and OP

d are differential time corrections to be added to [$UTC(DTAG) - UTC(OP)$],
and $u(d)$ are estimated uncertainties for the periods of comparisons.

Date	<i>d</i> /ns	<i>u</i> (<i>d</i>)/ns	Reference	Note
October 1994	5.0	2.0	Rapport BIPM-1994/12	(1)
June 1997	3.0	3.0	Rapport BIPM-1997/05	(1)
November 1997	6.0	2.0	Rapport BIPM-1998/01	(1)
May 1998	67.0	3.0	[1]	

The uncertainties given in this table are conservative. They are mainly driven by the uncertainty due to the ‘round-trip’ reproducibility at the OP.
