

## Calibrations between MSL and OP

*d* are differential time corrections to be added to [ $UTC(\text{MSL}) - UTC(\text{OP})$ ],  
and  $u(d)$  are estimated uncertainties for the periods of comparisons.

Date	<i>d</i> /ns	<i>u</i> ( <i>d</i> )/ns	Reference	Note
October 1996	-36.0	10.0	Rapport BIPM-1997/01	(1)

The uncertainties given in this table are conservative. They are mainly driven by the uncertainty due to the ‘round-trip’ reproducibility at the OP.

### Notes

- (1) Datum GPS Time/Freq receiver (s/n: D1016) at MSL
