

## Calibrations between ROA and OP

$d$  are differential time corrections to be added to  $[UTC(ROA) - UTC(OP)]$ ,  
and  $u(d)$  are estimated uncertainties for the periods of comparisons.

Date	$d/ns$	$u(d)/ns$	Reference	Note
April 1998	-8.0	2.0	Rapport BIPM-1998/07	(1)
June 1998	-6.0	3.0	[1]	
March 2002	-2.0	3.0	<a href="#">BIPM Report-2002/02</a>	(1)

The uncertainties given in this table are conservative. They are mainly driven by the uncertainty due to the 'round-trip' reproducibility at the OP.
