

# GNSS calibration of INRIM and RISE receivers with respect to OP G1 (1018-2022)

## Summary

In August 2022, the Laboratoire national de métrologie et d'essais, Systèmes de références Temps-Espace, Observatoire de Paris, Observatoire de Paris (OP) conducted a trip to calibrate GNSS equipment owned by the Istituto Nazionale di Ricerca Metrologica (INRIM) and the Research Institutes of Sweden AB (RISE). The trip started and finished at the OP, providing closure with respect to the OP Group1 reference receiver OP73.

The operations and report of measurements are described in the [report by OP](#).

### • Final results for the calibrated systems

The INTDLY or SYSDLY values of the receivers given in Table 1 and Table 2 have been computed by OP based on the results of the Group 1 trip [1001-2020](#) for OP73 (GPS and Galileo) and should not be updated to reflect later changes in the conventional INTDLY values of the reference receiver.

For a P3/E3/PPP UTC link A-B involving any Group 1 and any receiver in this trip, the uncertainty resulting from the calibration,  $U_B(A-B)$ , is computed as

$$U_B(A-B) = (U_{CAL0}^2 + \Delta U_{CAL}(A)^2 + \Delta U_{CAL}(B)^2)^{1/2} \quad (1)$$

where  $U_{CAL0} = 2.5$  ns is the conventional Group 2 value, and where  $\Delta U_{CAL}$  (generally zero) is specified for each system.

Changes in the set-up of the receivers after the calibration must be accounted for as described in section A.3.6 of the most recent Calibration guidelines in <https://webtai.bipm.org/ftp/pub/tai/publication/gnss-calibration/guidelines/>.

Table 1. Final P1/P2 INTDLY values from the 1018-2022 exercise. Values of REFDLY and CABDLY used to compute calibration results are also indicated for reference. All values are in ns. “Meas. Date” refers to the first day of the differential calibration, to which the calibration results can be applied. “Impl. Date” is the MJD when the results should be implemented in the receiver.

System	BIPM	Meas. date	INTDLY P1	INTDLY P2	REF DLY	CAB DLY	Note	$\Delta U_{CAL}$	Impl. date

Notes:

- (1) Results expressed in terms of SYSDLY
- (2) Results expressed in terms of TOTDLY
- (3) Extra uncertainty due to misclosure values larger than usual

- **Transfer of calibration performed by INRIM in July 2023**

In July 2023, the INRIM calibrated a new GNSS receiver IT07 by transfer of calibration with respect to the receiver IT10, see the [report by INRIM](#) and the results in Table 2.

The value  $\Delta U_{CAL}$  for use in equation (1) has been computed from information provided in the report. For UTC use, the ageing uncertainty will be based on the date of original calibration of IT10 i.e. 2022/08/26.

Table 2. Final P1/P2/E1/E5a INTDLY values for IT07. Values of REFDLY with respect to the indicated reference and of CABDLY during the calibration are also indicated for reference. “Meas. Date” refers to the first day of the differential calibration, to which the calibration results can be applied. “Impl. Date” is the MJD when the results should be implemented in the receiver.

System	BIPM	Meas. date	INTDLY P1	INTDLY P2	INTDLY E1	INTDLY E5a	REFDLY	CABDLY	Note	$\Delta U_{CAL}$	Impl. date
IENG	IT07	2023/07/01	26.8	27.4	29.1	31.0	372.7	130.5		0.4
